

GET THE MOST OUT OF VEHICLE TRACKING

Whether you've already got Navman Wireless vehicle tracking or you're thinking about getting it, here's an overview of the main features and one or two lesser known benefits too.

SAVE TIME

Vehicle tracking helps to keep your fleet operating as effectively as possible and saving time is one of the primary ways:

Cut admin time with automated reporting

You can set up automated reports like driver timesheets and have them sent straight to your inbox with no manual input required

Instantly check vehicle location data

Identify historical vehicle movements and check if drivers have visited specific locations, how often and how long they spent there.

Live traffic information at the touch of a button

Warn drivers in advance of traffic black spots and you'll be doing all you can to ensure time isn't wasted.

SAVE MONEY

FACT - vehicle tracking can save you a lot of money. Here's a few ways...

Reduce inflated overtime claims

Traditional timesheets are often inaccurate but with our Timesheet Reports you get an accurate picture of time spent on jobs so you never have to pay more than you need to.

Prevent unauthorised vehicle use

Monitor if vehicles are used out of hours to manage your van tax liability.

SAVE FUEL

One of the main benefits of vehicle tracking is to cut fuel bills –an average of 14% according to the Institute for Transport Management. Here's how:

Find the nearest vehicle to customers in seconds

Locating and routing the nearest vehicle to the next job will not only significantly reduce your fuel bill but also improve your response time, increasing customer satisfaction.

Prevent vehicle idling

By reducing engine idling you can significantly reduce your fuel spend. Simply run an Idle Report and you can instantly see when, where and for how long the vehicles in your fleet have been running idle.

TAKE CONTROL

Vehicle tracking provides unparalleled visibility of your drivers and allows you to measure performance and identify inefficiencies for improvement.

Geofencing

Instantly identify if one of your vehicles has entered or left a specific geographical location by setting up automatic geofence alerts.

Accountability and billing control

Trip and Site Reports show journeys made in a specific time period giving you greater accountability of time spent on jobs for billing purposes while helping you ensure employees are on site as expected.

STAY COMPLIANT

With features including Maintenance and Overspeed Reports and a Working Time Directive module, Navman Wireless helps you stay on the right side of tough legislation requirements.

Keep on top of maintenance

With Navman Wireless you can monitor the maintenance requirements of your entire fleet. The Maintenance Status Report highlights any work which is due so you can plan work in advance, minimising vehicle downtime.

Improve driving and reduce accidents

Overspeed Reports let you monitor driver speeds and take proactive corrective measures to ensure your vehicles are being driven safely and efficiently, cutting fuel bills and reducing the risk of accidents too.
